Development Review Committee June 23, 2022 Urban Forestry Comments

1235 Washington-Lot Split: No Comment from Urban Forestry.

1500 and 1502 Vernon Easement: Originally, there was an issue with a section of this wall/fence being beyond the mean high water line and in State lands-water. It appears information in the Planning file from the FDEP is stating that the wall is not below the mean high water line. I have attached photos from recent site visit, for the file. The urban forestry manager has no comment regarding the easement request for the wall. There are protected trees near this wall close to the road/intersection area. Regarding the concert slab area, the urban forestry manager has no comment regarding the easement request but does want to remind the property owner and representative that there are two protected coconut palms in this side area.
