

Staff Report for Item 11a

To: Chairman Michael Miller and Historic Architectural Review Commission Members

From: Enid Torregrosa-Silva MSHP
Historic Preservation Planner

Meeting Date: January 27, 2015

Applicant: Meridian Engineering/ Richard Milelli, Engineer

Application Number: H15-01-0004

Address: #920 Eisenhower Drive

Description of Work

Raise a historic house 3'-6" and raise a rear accessory structure to be above flood elevation. New exterior staircase. New side addition.

Site Facts

The main house in the site is listed as a contributing resource. The two and a half-story frame vernacular house was built circa 1906. The structure was built almost at grade and the area in question is prone to flood during heavy rain. The historic house has not been properly maintained for the past decades and much rotted floors and siding has been found. The proposed plans received Planning Board approval for required variances for front, side and rear yard setbacks, minimum open space requirements and habitable space. The proposed plans also received approval for height variance from the Board of Adjustments. The historic single family house will still be used as a multifamily structure. The existing solar panels located over the south side of the main roof were never approved.

Guidelines Cited in Review

- Additions/ Alterations and New Construction (pages 36-38a), specifically guidelines for alterations 1, 3, 4, 5 and 8. New construction guidelines, specific guideline 2.

Staff Analysis

The Certificate of Appropriateness in review proposes the construction of new piers for the main house and for a one story non-historic accessory structure in order to elevate the structures. The actual height of the house, from the crown of the road is 27'-3 ³/₄" and the proposed new height will elevate the structure up to 31'-5". The majority of the buildings surrounding the site are two or more stories. The plan proposes wood lattice as infill between the new footings.

In order to elevate the house for the construction of the new footings the front and side porches will need to be dismantled. Replication of the front historic porch is proposed in the plans. Staff recommends that all salvaged wood and material must be reused during the rebuild process. The side non-historic porch will also be rebuilt.

The plan also includes the enclosure of the front portion of a carport located on the south side of the main house and as a small addition to the back of that carport. The new addition will have 6 over 6 double hung aluminum windows, while the front façade of the proposed carport enclosure will have 6 over 6 true divided lite windows. New exterior staircases on the back, side and front of the house are proposed to be replaced in order to meet current code since the house is proposed to be elevated. All new stairs will be made in wood.

Repairs to the main house include wood siding and trims to match existing, repairs or replacement of railings and porch posts to match existing in material and profile. The plans also include the removal of the solar panels that were never approved for installation.

For the back cottage new wood stairs and renovations are proposed. This structure is non-historic.

Consistency with Guidelines

1. The proposed elevation of the building will not alter the proportions of the main structure. Since the house was built almost on grade the structural components of the first floor have been severely damaged due to humidity and decay. Although the house is proposed to be raised 3'-6" staff opines that the structure will not overshadow surrounding buildings.
2. The proposed enclosure of the existing carport and its proposed small back addition will not obscure or diminish the historic character of the house.
3. The proposed renovations to the house are much needed and will be consistent with the guidelines.

It is staff's opinion that the proposed design meets the guidelines for new construction and additions. Although the existing house was built almost at grade the proposed new piers will not harm or adversely change the proportions and mass of the structure nor will negatively impact the streetscape.

DETAILED PROJECT DESCRIPTION INCLUDING QUANTITIES, SQUARE FOOTAGE ETC.,

Raise main house 3'-6" to elevate above flood elevation. Replace first floor porches on main house and construct new staircases and railings. Remove secondary porch, solar water heater, and first floor porches. Raise pool house above design flood elevation, construct new roof, enclose front porch. Small addition to main house (south side), demo shed

BUILDING HEIGHT REPORT

September 29, 2014

RE: David Wolkowsky

920 Eisenhower Drive, Key West, FL 33040

M.C.P.A. Alternate Key No. 1025054

CLEINT: Meridian Engineering

On September 25, 2014 a site visit was conducted at the above stated property. The purpose of this visit was to conduct a roof height measurement on the above referenced property. At the time of the site visit the structure was undergoing renovations.

- The highest point on the building was determined to be the roof peak.
- The adjacent crown of the road elevation on Eisenhower Drive was determined to be 3.02 feet.
- The threshold of the first floor front door elevation is 3.69 feet.

The distance between the said highest point on the building and the said adjacent crown of the road has been determined to be **28.0 feet**.

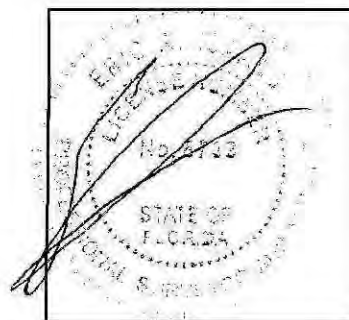

The distance between the said highest point on the building and the said first floor front door threshold has been determined to be **27.31 feet**.

Elevations shown hereon are in feet and based on the National Geodetic Vertical Datum of 1929 (NGVD 1929).

Benchmark Description: National Geodetic Survey Benchmark "D 121" (P.I.D. AA0020).
Elevation=3.91' (NGVD 1929).
