

**Historic Architectural Review Commission
Staff Report for Item 4a**

To: Chairman Bryan Green and Historic Architectural Review
Commission Members

From: Enid Torregrosa, MSHP
Historic Preservation Planner

Meeting Date: July 28, 2015

Applicant: Thomas E. Pope, Architect

Application Number: H15-01-0829

Address: #805 Shavers Lane

Description of Work:

Renovations to contributing house, including siding replacement, porch restoration, and elevating the house. Request to move the house towards the northwest side. New rear and side additions and site work.

Site Facts:

The house located at #805 Shavers Lane is a contributing resource to the historic district. The one-story frame vernacular house was built circa 1926 with two sawtooth attached on the back. By comparing the 1962 Sanborn map and a circa 1965 photo, an attached shed addition was built on the rear of the house. The building has a concrete floor front porch with decorative metal supports. The north-west side of the structure is visible from Petronia Street, as a parking lot sits on the corner. For FEMA regulations purposes, the house is located on an x- zone. The house has glass jalousie windows, a mix of lap and novelty wood siding, and metal v-crimp roofs.

Guidelines Cited in Review:

- Additions and alterations/ New construction (pages 36-38a); specifically guidelines for additions and alterations and guidelines 2 and 4 of new construction (pages 38-38a)
- Foundations (page 34).

- Windows (pages 29-30), specifically guideline 3.

Staff Analysis

The Certificate of Appropriateness in review proposes new one-story frame additions to the rear and south side of a contributing house. The proposed additions will be slightly lower in height than the historic house and will have gable roofs. The new side additions will continue the same roof configuration of the existing sawtooths. The new design proposes the addition to be an “L” shape footprint that will be almost the same square footage of the existing house. For the new addition, all windows will be 6 over 6 wood units and metal sliding doors with single glass panel are noted on the rear elevation. Siding will be hardi-board horizontally installed. The new roof will have metal v-crimp.

The plan includes elevating the historic house up to 2’-4” from its actual +12 inches and its relocation of approximately 2’-10” towards the north-side property line. New piers are proposed. The plan includes the renovation of the historic house by building a new three bay wooden front porch and a new porch roof with different pitch. All siding will be removed and new wood lap siding is proposed to replace existing. New true divided 6 over 6 wood windows will replace all existing jalousie units. The plan also includes a swimming pool on the back portion of the lot and a wooden deck with a small roof supported with brackets and a front four feet tall wood picket fence that will replace a chain link one.

Consistency with Cited Guidelines

The current proposal includes the construction of an “L” shape one-story addition that has almost the same square footage of the historic house. The new addition, located on the back and south side of the house, will be visible from Petronia Street and Shavers Lane. The proposed design brakes the mass and scale of the addition by extending the existing sawtooths. Nevertheless, the back, and side additions will be visible from Petronia Street and Shavers Lane.

At this time, the house sits on low piers, having not much crawling space for ventilation. The relocation of the house responds to adding more space to the side.

It is staff’s opinion that the proposed design is more sensible than the previously submitted, as a one and a half story was attached on the back of the historic house. However, the new design creates the loss of balance and symmetry of the historic house by the introduction of side additions. The new wood porch and new wood true divided windows for the historic portion of the house are appropriate design improvements to the structure.

The elevation of the historic house is not a requirement to meet FEMA regulations since the house is located on an “x” flood zone. Nevertheless, the house shall be elevated to a minimum point in order to create a better crawling space for ventilation purposes. Staff opines that the proposed elevation of the piers responds to the wish of having the new additions set at the same floor level with the existing house that sits very low at grade level.
