Hi Karen,

Clifton did a canopy inspection on the Sapodilla Tree at 906 Georgia street. These photos show the results of what he found. Multiple termite trails, bad connections, and a very deep cavity that is holding moisture. These are just some of the things he found. At the tree commission, he will be able to share more of this information with you all. Please let me know if you are able to show these photos at the tree commission or if it is best for me to print them out and show them to the board.

Thank you!
