ADDENDUM NO. 4
Phase One: Southernmost Point Seawall Project
ITB 25-010

This addendum is issued as supplemental information to the Invitation to Bid package for clarification of certain matters of both a general and a technical nature. The referenced Invitation to Bid package is hereby amended in accordance with the following items:

1. Clarification:

The City has been made aware that the Engineer of Record (EOR) provided responses to bidder inquiries during a phone call on May 13, 2025, at 1:00 PM. These responses were given outside the designated question-and-answer period and did not come through the official point of contact identified in the bid documents.

In order to ensure a fair and transparent bidding process and to provide all bidders with equal access to information, the City will extend the bid due date for this project as outlined below.

2. Changes to Submission Requirements: [No Changes]

3. Updates to Project Timeline:

New Bid Due Date: *May 21, 2025, at 3:00 PM*, at the same location specified in the bid documents.

4. Responses to Questions:

Questions and Answer provided by Engineer of Record (EOR):

- 1) **Question:** Due to the seawall's geometry, it is expected to perform as "mass concrete". Mass concrete is at risk of performance issues and cracking when:

- The maximum temperature in the concrete after placement exceeds 160°F
- The maximum temperature difference between any two areas of the concrete exceeds 35°F

Answer provided by EOR: The contractor is responsible for the means and methods required to place the seawall concrete, in accordance with ACI 301, to avoid damage. This is generally accomplished by specific mix designs and/or regulating the temperature with an internal cooling system. Additionally, test mixes and test concrete placements are generally used to confirm that the mass concrete can be placed and cured without damage.

The concrete notes (provided on sheet S-100) follow the guidance of the FDOT standard specifications. They are intended to reduce the temperature gain of the concrete, by limiting the total cementitious material and using a ternary blend that limits the percent of Portland Cement (this also provides the benefit of making the cement less permeable). However, the final mix design is the responsibility of the contractor and their concrete supplier; therefore, a mix outside of these limits would be an acceptable alternate provided it meets note 2.3.4.
