Growth Management Director

Subject: **25-4328 - Coral Reef Restoration Partnership – Year Two Annual Report**

---

### **Introduction**

Environmental Protection is one of the six priority goals of the Key West Strategic Plan. Annually since FY23 the City has partnered with the Mote Marine Laboratory and Aquarium (“MOTE”), allocating \$100,000 for coral reef restoration and maintenance from cruise ship disembarkation fees.

As part of the agreement, MOTE provides an annual report presentation on their efforts.

### **Background**

In 2019, MOTE was designated as a core partner with NOAA’s Mission: Iconic Reefs program in recognition of their innovative science and success in demonstrating how coral genetic resilience is the key for successfully restoring the coral reefs of the Florida Keys.

In 2020, MOTE became the first scientific organization to carry out every step of the staghorn coral sexual propagation process – from spawning and outgrowing in the laboratory, to out planting and maintaining corals on the reef until they reached sexual maturity, became gravid and spawned again to create an entire second generation of disease-resistant and climate resilient corals.

In 2021, the City of Key West surveyed its residents for the creation of a Strategic Plan, finalized in August of that year. Environmental Protection of Nearshore Waters was fourth out of six community priorities that came from that survey effort.

On April 5<sup>th</sup>, 2022, the Commission passed an ordinance to establish a funding mechanism for a Coral Reef Restoration Fund and water quality testing from the \$1M+ the City annually received from cruise ships. The Coral Reef Restoration Fund's express purpose is to restore and maintain coral reefs adjacent to the City of Key West and engage certified, independent, qualified reef restoration experts, to be identified by resolution of the City of Key West annually, to restore and maintain such reefs and shall allocate annually these funds to the respective programs.

In FY23, the City set aside \$100,000.00 in new funds for Coral Reef Restoration partnerships with MOTE.

On April 18, 2023, the City Commission approved the first consultant agreement with MOTE for the purposes of science-based coral reef restoration and maintenance, which included:

- Outplanting of over 1,000 corals to restore nearly 100 square meters of a targeted coral reef to ~30% coral cover in Key West waters.
- Utilize resilient genetic strains.
- Conduct multiyear monitoring to assess survival and ecosystem health.
- Implement a Key West public outreach campaign.
- Provide a final report accounting for how the funds were spent, the number of services provided and describing how the funds aided in reef restoration and maintenance.

The agreement was for one year and ended on February 29, 2024. The agreement allowed for an extension for two additional one-year terms, upon the mutual consent of both parties and the approval of the City Commission. The Annual Report was presented to City Commission on April 4, 2024.

On August 8, 2024, the City Commission granted the Year Two extension. The Year Two Annual Report will cover the Year Two agreement period from 8/9/2024 to 2/28/25.

On April 14<sup>th</sup> 2025, the City Commission granted the Year Three extension. The Year Three Annual Report will be presented at the end of the Year Three agreement period (3/1/25 – 2/28/26).
