Description of Proposed Development and Use:

The proposed development shall consist of developing the site into a drive-through restaurant.

Solution Statement:

The Developer is proposing to redevelop the subject Property in a way which is permitted as of right and compatible with this corridor of North Roosevelt Boulevard. The site is non-conforming as to all aspects of pervious surface, drainage, building elevation with respect to flood height requirements and landscaping. The proposed plan will improve all of the existing non-conformities. Bulk recycling along with solid waste disposal containers shall be adequately buffered from site along with adequate grease interceptors to service the proposed operation. Landscaping along the rear of the Property will be dense to mitigate sound and light from leaving the site, along with the installation of a new solid fence to create a visual buffer. Dark sky lighting will be used along with measures to buffer light from the Property from intruding on the neighboring rear property owners. Adequate measures have been taken to accommodate life safety and access to and from the site for emergency vehicles.

RE: Landscape Waiver Request:

Dear Ginny:

Pursuant to Article V of Section 108 of the City of Key West Code, and in particular Section 108-352, the Applicant is requesting a waiver to the landscape buffer requirements of the Code. Currently the subject properties have no landscape buffering at all and have a combined total tree count of three (3) trees. The site improvements to both properties in terms of landscaping are drastic improvements and will decrease the existing non-conformities. The original landscape plan maintained a great buffer yard, but at the request of the Fire Marshal to increase better circulation for emergency vehicles, the amended plan requires a request of the following buffer requirements:

| | | | |
|--------|-----------------|----------------|------------------------------|
| Front: | Existing (None) | Required (20') | Proposed (1'8 ½ ") |
| Rear: | Existing (None) | Required (10') | Proposed (4'6") ¹ |
| Side: | Existing (None) | Required (5') | Proposed (6'11") |

Please do not hesitate to contact me if you should have any questions regarding any of the enclosures.

Very truly yours,

Gregory S. Oropeza, Esq.

¹ It is noteworthy to consider that currently the property has taken over a 10' utility easement/alley. The Applicant is restoring the easement/alley and therefore providing a net gain of 14'6" of buffer between the Applicant's property and the rear neighbors.

Project Description:

Project Description: The proposed project is to redevelop the Property, currently operated as Banner Tire and the Blue Flamingo Café, into a drive-through restaurant which is a permitted use in the CG zoning district, together with the voluntary inclusion of two (2) workforce affordable housing units which are a conditional use in the CG zoning district. The proposed project will improve existing site improvements as to City Code requirements in all aspects of the Land Development regulations, needing only a landscape buffer waiver in addition to the minor conditional use development application.

IRRIGATION MASTER PLAN

GENERAL IRRIGATION NOTES

- All mainline and lateral line piping and control wires under paving shall be installed in separate sleeves. Main and lateral line sleeves shall be a minimum of twice (2x) the diameter of the pipe to be sleeved. Control wire sleeves shall be sufficient size for the required number of wires under paving.
- Pipe sizes shall conform to those shown on the drawings. No substitutes of smaller pipe sizes shall be permitted but substitutions of larger sizes may be approved. All damaged and rejected pipe shall be removed from the site at the time of said rejection.
- All sprinkler heads shall be set perpendicular to finished grade unless otherwise specified.
- The irrigation contractor shall flush and adjust all sprinkler heads and valves for optimum coverage with minimal overspray onto walks, streets, walls, etc.
- Irrigation heads shall be a minimum of 12" from buildings.
- This design is diagrammatic. All piping, valves, etc. shown within paved areas are for design clarification only and shall be installed in planting areas whenever possible. The contractor shall locate all valves in shrub areas where possible.
- It is the responsibility of the irrigation contractor to familiarize himself with all grade differences, location of walls, structures and utilities. The irrigation contractor shall repair or replace all items damaged by his work. He shall coordinate his work with other contractors for the location and installation of pipe sleeves through walls, under roadways and paving, etc.
- Do not willfully install the sprinkler system as shown on the drawings when it is obvious in the field that unknown obstructions, grade differences, water levels or differences in the area dimensions exist that might not have been considered in the engineering. Such obstructions or differences should be brought to the attention of owners representative. In the event this

- notification is not performed, the irrigation contractor shall assume full responsibility for any revisions necessary.
- All sprinkler equipment not otherwise detailed or specified shall be installed as per manufacturer's recommendations and specifications.
- The contractor shall provide (Pressure Compensating Screens) as necessary to reduce or eliminate over spray into streets, walks or other areas as dictated by the owner's authorized representative.
- All remote control valves, gate valves, quick couplers and control wire splices shall be installed in approved valve boxes with locking covers. All shall be marked indicating controller and station numbers for control valve.
- Contractor to provide the Owner with a complete irrigation design in compliance with Owners program. All required plantings shall be irrigated.
- Irrigation system shall be designed for complete coverage only. Verify with owner limits of irrigation prior to bidding.
- The sprinkler system to be based on a minimum operating pressure of 40 PSI. The irrigation contractor shall verify water pressures, flows, elevations, and other requirements prior to construction. Report any differences between the water pressure and flows indicated on drawings and the actual pressure reading at the irrigation point of connection to the owners authorized representative.
- Installer shall conduct final testing and adjustments to achieve design specifications prior to completion of the system and acceptance by the owner or owner's representative.
- The installer shall provide property owners and users with post-construction documentation including: as-constructed drawings, recommended maintenance activities and schedules, operational schedule, design precipitation rates, instructions on adjusting the system to apply less water after the landscape is established, maintenance schedule, water source, water shut-off

- method, and the manufacturer's operation guide for the irrigation controller. To the extent feasible, similar information should be made available for subsequent property transfers.
- Any changes and/or modifications to the water source shall require appropriate adjustments to the system design.
- The contractor shall be responsible for providing all code required backflow preventers in addition to all permits as required by the governing agencies including water use permits.
- The irrigation system shall be connected to an irrigation well or other suitable source, depending on availability. Contractor to design a drip irrigation system to provide 100% coverage based on water source size and pressure at point of connection.
