**Historic Architectural Review Commission  
Staff Report for Item 5**

**To:** Chairman Bryan Green and Historic Architectural Review  
Commission Members

**From:** Kelly Perkins, MHP  
HARC Assistant Planner

**Meeting Date:** January 23, 2018

**Applicant:** William Shepler

**Application Number:** H17-03-0019

**Address:** #715 Chapman Lane

---

**Description of Work:**

Renovations to house, including porch repair, new rear addition, pool, deck, and fences.

**Site Facts:**

The one-story house at 715 Chapman Lane is listed as a contributing resource in the survey, and was constructed in 1928 according to the survey, but appears in the 1912 Sanborn map. The building is a frame vernacular structure with a front gable roof. The rear has a sawtooth roof section that appears to be original, as the structure's length never changes on the Sanborn maps. From a site visit, it is obvious that the sawtooth section is very old. It also visible in the historic photograph from c.1965. The house has a mish-mash of windows, but all appear to be very old with the thin muntins and wavy glass.

**Guidelines Cited in Review:**

Secretary of the Interior's Standards for Rehabilitation (pages 16-17), specifically Standards 1, 2, 3, 5, 6, 9, and 10.

HARC Guidelines for Windows (pages 29-30), specifically guidelines 1, 2, and 10.

HARC Guidelines for Additions and Alterations (pages 37a-37k), specifically guidelines 2, 5, 6, 11, 13, 14, 19, 21, 22, and 26.

HARC Guidelines for New Construction (pages 38a-38q), specifically guidelines 1, 2, 11, 24, and 25.

HARC Guidelines for Accessory Structures (pages 40-41), specifically guidelines 1 and 9.

### **Staff Analysis**

This Certificate of Appropriateness proposes the restoration of the front porch, as the current porch is failing. The front door, that is not in character with the house, will be replaced as well as the transom window above the door. The rear of the sawtooth section of the house will have new sliding doors installed. The house currently has a mixture of historic windows. The proposed plans say that the windows will be salvaged, but do not show a use of the 6 paned windows. Also, one window opening in the historic sawtooth is removed. That window currently has a historic 6/6 window in that opening.

Site work is also proposed with new wood deck and swimming pool in the rear. New perimeter fencing is proposed, and the inappropriate 6-foot fence on the front will be removed. The project also includes building an awning structure in the rear that is attached to a 9 foot, 4 inch tall wall. This wall is technically separated a few inches from the main structure, but it reads as an attachment to the historic structure.

### **Consistency with Guidelines**

1. Renovations to Main House: The renovations to the main house, with the exception of the windows, comply with the HARC Guidelines and Secretary of the Interior's Standards for Rehabilitation.
2. Windows: The project proposes to replace and remove historic windows. The house currently has a mixture of very old windows throughout the building. A few of the sashes are in bad shape (one sash is missing), but the windows are generally in very good condition with only failing paint and a few rotted areas on the bottom that can be fixed.

The guidelines are clear that original windows and historic materials need to be repaired and not removed. Guideline 10 of Windows states, "Original windows, transoms, or sidelights may not be moved, changed in size, shape or design, boarded up or bricked over."

Guideline 2 of Additions and Alterations state, "The removal of historic elements or material or the alteration of a feature that characterizes a building or its site must be avoided." This is very similar to the Secretary of the Interior's Standards for Rehabilitation, Standard 2.

The Secretary of the Interior's Standards also state that "Deteriorated historic features shall be repaired rather than be replaced." Standard 5 states that "Distinctive features...or examples of craftsmanship that characterize a property should be preserved."

These historic windows with wavy glass are irreplaceable as the techniques and materials used are no longer available. All efforts should be made to preserve these historic windows.

3. Wall: The project also proposes a new accessory structure of a 9 foot, 4 inch tall concrete wall that is attached to an awning structure. On top of the wall will have wood louvers that will make the total wall's height 11 feet, 10 inches. While the wall is shorter than main house, its length and solid massing without any openings add onto the massing of the main house – even though the structure is separated by a few inches.

Guideline 22 of Additions and Alterations states, “New additions must incorporate similar proportions, window and door sizes, and rhythms found in the main building. The installation of windows or doors that are visually incompatible with the existing building is discouraged.”

Guideline 1 of New Construction includes, “Acceptable proposals will be compatible with the size, scale...character of the district, sub-area or block and designed so that when completed the urban context in which it stands will not be jarred by the look of the new building.” This 9 foot tall wall with 2.5 foot tall louvers on top will be very different from the neighboring context and will be jarring. No other property in the area has a concrete wall of that height without any openings in the general area.

Guideline 25 of the same section states, “Solid to void ratios of walling to windows and doors shall be similar to the typology in the immediate area.” This wall will be very solid – only the section that is located in the rear section will have a height of 6 feet (which is a normal privacy fence height in the historic district). That section has a large opening between the top of the awning frame and the top of the wall – decreasing the massing and impact on the neighboring properties. The rest of the concrete wall with the total height of 11 feet, 10 inches will have no openings and will read as a solid area.

It is staff's opinion that the renovations to the main house comply with the guidelines, with the exception of the windows. Staff contends that if the project is approved with the condition that the applicant works with staff to repair and restore the historic windows.

The concrete wall, with its tall height, is not consistent with the guidelines in regards to new construction and additions and alterations. The concrete wall will be very tall with no openings, creating a massive structure that is jarring with the historic district.

Ok, I'm just going to put a condition in my staff report that the windows should be re-used and their re-use can be worked out between you and staff.

No problem- we will do all 6 over 6. You can put that in the report and I will explain at the meeting. We can not postpone any longer .

Thanks,

Will

But the important part is the glass. That wavy glass is hand made and is not replicable. It is one of the most significant parts of a historic window. I cannot support, nor do I think it's possible, to change a 6/6 window to a 2/2.

We are trying to use the 2 over 2 parts to make all 2 over 2 - but if not, we will use all 6 over 6. We won't know until we take them apart and see what we can re-use.

Hi Will,

What's happening to the 6/6 windows? Your proposed elevations show all 2/2, but then your existing elevations show 6/6 to be salvaged and reused?
