## **Draft Energy and Water Reduction Resources**

## I. 15% Energy and Water Reduction Resources

Pursuant to the City's adopted Climate Action Plan reduce greenhouse gas emissions by 15% and to demonstrate sustainable community leadership, applicants must document 15% water and 15% energy use reductions on site. As a governmental entity the city is committed to being a responsible. By investing in sustainable projects the City will ensure greater lifecycle of redevelopment projects, healthier conditions for the occupants and the community as a whole, and the overall reduction of utility costs for the property owner.

1. An energy and water baseline report consisting of 12 months of energy and water use. For including multifamily structures, building data should be input into EPA Portfolio Manager (<https://www.energystar.gov/istar/pmpam/>), and provided to the City of Key West Sustainability Coordinator. For residential, either EnergyGuage or RESNET may be used to establish a baseline.
