***Review with old guidelines for additions, alterations, and new construction**

Description of Work:

Changes to front elevation and new elevator shaft. Siding repairs and painting.

Site Facts:

The principal building under review, build in the midst of 1800, is a contributing resource. The principal building survived the April 1 1886 fire that devastated the town. The building is located on the northeast corner of Duval and Greene Streets was originally a general merchandise store with housing on its second floor. Between 1900 and 1912, the structure became the main office of the Key West Electric Company. The 1912 Sanborn map depicts for the first time a one-story extension of the corner building towards Greene Street, keeping a two-story structure setback, which still stands today. The one-story addition in question was originally intended for a stock room for the Electric Company. Current elevations of the one-story facade facing Greene Street are extremely altered and the easternmost portion of the addition is not historic. In June 16, 2016, the project received approval from the Planning Board for conditional use and parking variance. Since then, the project was never submitted to HARC, still considers this application to be reviewed under the previous HARC Guidelines for additions, alterations, and new construction.

Guidelines Cited on Review:

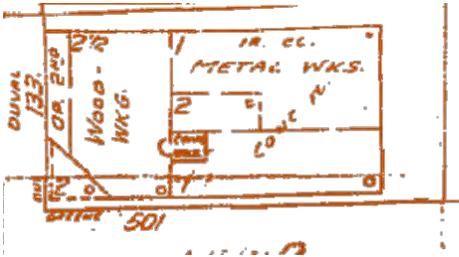

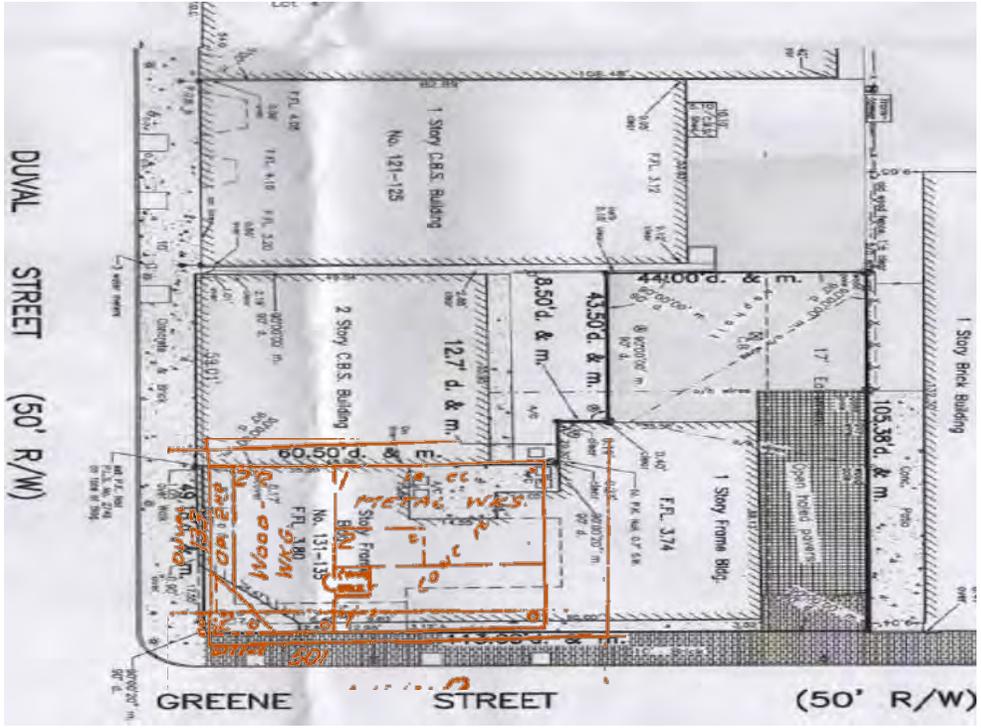

- Additions and Alterations (page 36-37), specifically guidelines 3, 4, and 8 of page 37.
- New Construction (pages 38-38a), specifically guidelines 4, 5, 6, and 7.

Staff Analysis

The Certificate of Appropriateness in review is for the addition of an elevator shaft to access a proposed roof deck and second floor of the historic building at the corner of Duval and Greene Street. The design also proposes the addition and alterations of non-historic parapets over the existing one-story extended addition that faces Greene Street. The proposed elevator shaft will be located towards the east side of the second floor historic structure and setback approximately 13'-6" from the property line. As the design includes a roof deck there is a need to altered two non-historic parapet walls and add a new one towards the easternmost portion of the building. Signage is not included as part of the application. The main building and all the structure facing Greene Street will be painted white, as specified by the contractor.

Consistency with Guidelines

Staff opines that the proposed design will not have an adverse effect on the historic building or surrounding urban context. The existing facades of the one-story portion of the building facing Greene Street has transformed from their original character. The proposed elevator shaft will be lower in height than the historic second floor addition and will sit setback from the property line.

ADDITIONS/ALTERATIONS/NEW CONSTR. OLD GUIDELINES.

HARC reviews alterations to non-contributing structures to ensure that the proposed alterations will not create a structure that is an intrusion in the historic district. Whenever possible, HARC will encourage projects that lessen the detracting of an addition, alteration or new structure upon the integrity of the historic district, whether the construction is new or proposed for contributing or noncontributing buildings within the district.

1. A structure shall not be altered and/or expanded in such a manner that its essential character-defining features are disguised or concealed.
2. Additions and alterations may be reviewed more liberally on *non-contributing buildings*, which lack architectural distinction.
3. Addition design should be *compatible with the characteristics* of the original structure, neighboring buildings and streetscapes.
- 4. Additions should be constructed with a scale, height and mass that is appropriate to the original building and its neighbors.
- 5. Additions should be attached to *less publicly visible secondary elevations* of an historic structure.
- 6. Additions should not *alter the balance and symmetry* of an historic structure.
7. No existing structure shall be enlarged so that its proportions are out of scale with its surroundings.
8. New additions should be designed and constructed to be clearly differentiated from the historical so that character-defining features are not changed, obscured, damaged or destroyed.

In order to preserve the integrity of the Historic District, a number of design criteria have been developed by which individual structures may be compared and evaluated. The intent in developing these criteria has been to identify specific design elements which, if repeated or echoed a sufficient number of times, will assure the maintenance and preservation of the architectural character of the district.

These criteria will become the working tools for the developer, architect and builder. Ideally, they should be studied and evaluated before design development work begins so that the desired relationships can be established as design objectives, properly relating individual buildings to the total environment.

These Design Guidelines are not intended to exclude good contemporary design, as new complementary design is encouraged. Traditional design elements are also encouraged, yet the distinction between historic and contemporary should be evident.

The criteria that guides new construction in historic zones insures that new construction shall not interfere with the essential form and integrity of the historic properties and their environment.

Key West's historic district's tightly spaced blocks contain a wide variety of architectural styles, which relate well to each other. The relationships between the buildings create much of the character of the district. Their height, detailing, mass roof forms, and landscaping all contribute to its visual harmony. It is important that new construction harmonize with the existing historical building stock and streetscapes.

Traditional wood-frame buildings in Key West were constructed on low piers that provided a crawl-space under buildings to allow air circulation and to provide protection from flooding. The City also recognizes that conformity with current FEMA regulations with regard to elevation is important. However, the elevation of buildings to allow people and cars to pass underneath is not traditional, and the insertion of such structures into historic neighborhoods might interfere with the essential form and integrity of historic properties and their environment.

The historic areas of Key West are traditionally low-rise. Nineteenth-century buildings, having no elevators, were limited in height by the elevation that could reasonably be reached by stair. Single-family houses are traditionally no more than two or two-and-a-half stories. Only church steeples, important civic buildings with clock towers, the lighthouse, and other notable landmarks break the skyline. The City Commission finds that the preservation of this traditionally low-rise cityscape in Old Town, interrupted only by significant, symbolically important structures, is a matter of public policy benefiting the people of Key West and the long-term stewardship of historic neighborhoods in Key West.

1. **Siting** – New construction must conform to all current city easement, setback and building requirements. No existing building shall be relocated and no new structure shall be placed closer to the sidewalk, street or visible alley, than the distance of pre-existing historic structures. Areas reserved for parks or open space must be retained.

 2. **Elevation of finished floor above grade** - Applications for buildings with the first finished floor above the minimum height necessary to comply with federal flood regulations will not be approved unless the applicant demonstrates that such elevation does not interfere with the essential form and integrity of properties in the neighborhood. In situations wherein parking is proposed below the first finished floor, HARC shall consider how visible the parking is from the public right-of-way; whether the parking area is enclosed or otherwise concealed by walls, louvers, lattice, landscaping or other features; and whether fill and/or berms are used to minimize the gap between the first finished floor and the crown of the nearest road.

3. **Height** – must not exceed two and a half stories (see Figures 1 and 2 pages 77 and 78). There must be a sympathetic relationship of height between new buildings and existing adjacent structures of the neighborhood. New buildings must be compatible with historic floor elevations. The height of all new construction shall be based upon the height of existing structures within the vicinity.
4. **Proportion, scale and mass** – massing, scale and proportion shall be similar to that of existing historical buildings in the historical zone. No new construction shall be enlarged so that its proportions are out of scale with its surroundings. No new construction shall be more than two and a half stories. No structure shall outsize the majority of structures in the streetscape or historic zone.
5. **Compatibility** – Design must be compatible with Key West architectural characteristics in the historical zones. All new construction must be in keeping with the historic character in terms of size, scale, design, materials, color and texture.
6. **Building Detail** – All new buildings shall incorporate a level of detail that assures compatibility with the surrounding historic context. New construction shall not precisely mimic the details of historic buildings but should have features that are compatible with the lines of historic architecture.
7. **Relationship of materials** – Materials used on new construction shall be of similar color, dimension, texture, and appearance as historic fabrics. The predominant exterior finish in historic zones is wood weatherboard, clapboard, drop siding, or board and batten. Exceptions for the use of composite materials may be permissible. Roofing is primarily sheet metal or metal shingles. New construction shall establish a relationship with existing historic structures by utilizing similar finishes and metals.

WE WOULD LIKE TO PAINT ALL OF THE UPSTAIRS EXTERIOR SIDING WHITE TO KEEP CONSISTENT WITH THE HISTORICAL LOOK OF THE BUILDING. AND WE WOULD ASK TO BE ABLE TO PAINT ALL OF THE DOWNSTAIRS GREEN TO KEEP THE COHESIVENESS OF THE GREEN ROOM BUSINESS. AS YOU CAN SEE BELOW THERE WAS GREEN, YELLOW, AND BLUE THAT WAS ALLOWED BEFORE OUR BUSINESS OCCUPIED THAT SPACE - SO WE WOULD LIKE TO JUST KEEP IT JUST GREEN AROUND (PER THE EXISTING ALLOWED COLOR GREEN ROOM WAS APPROVED FOR.)

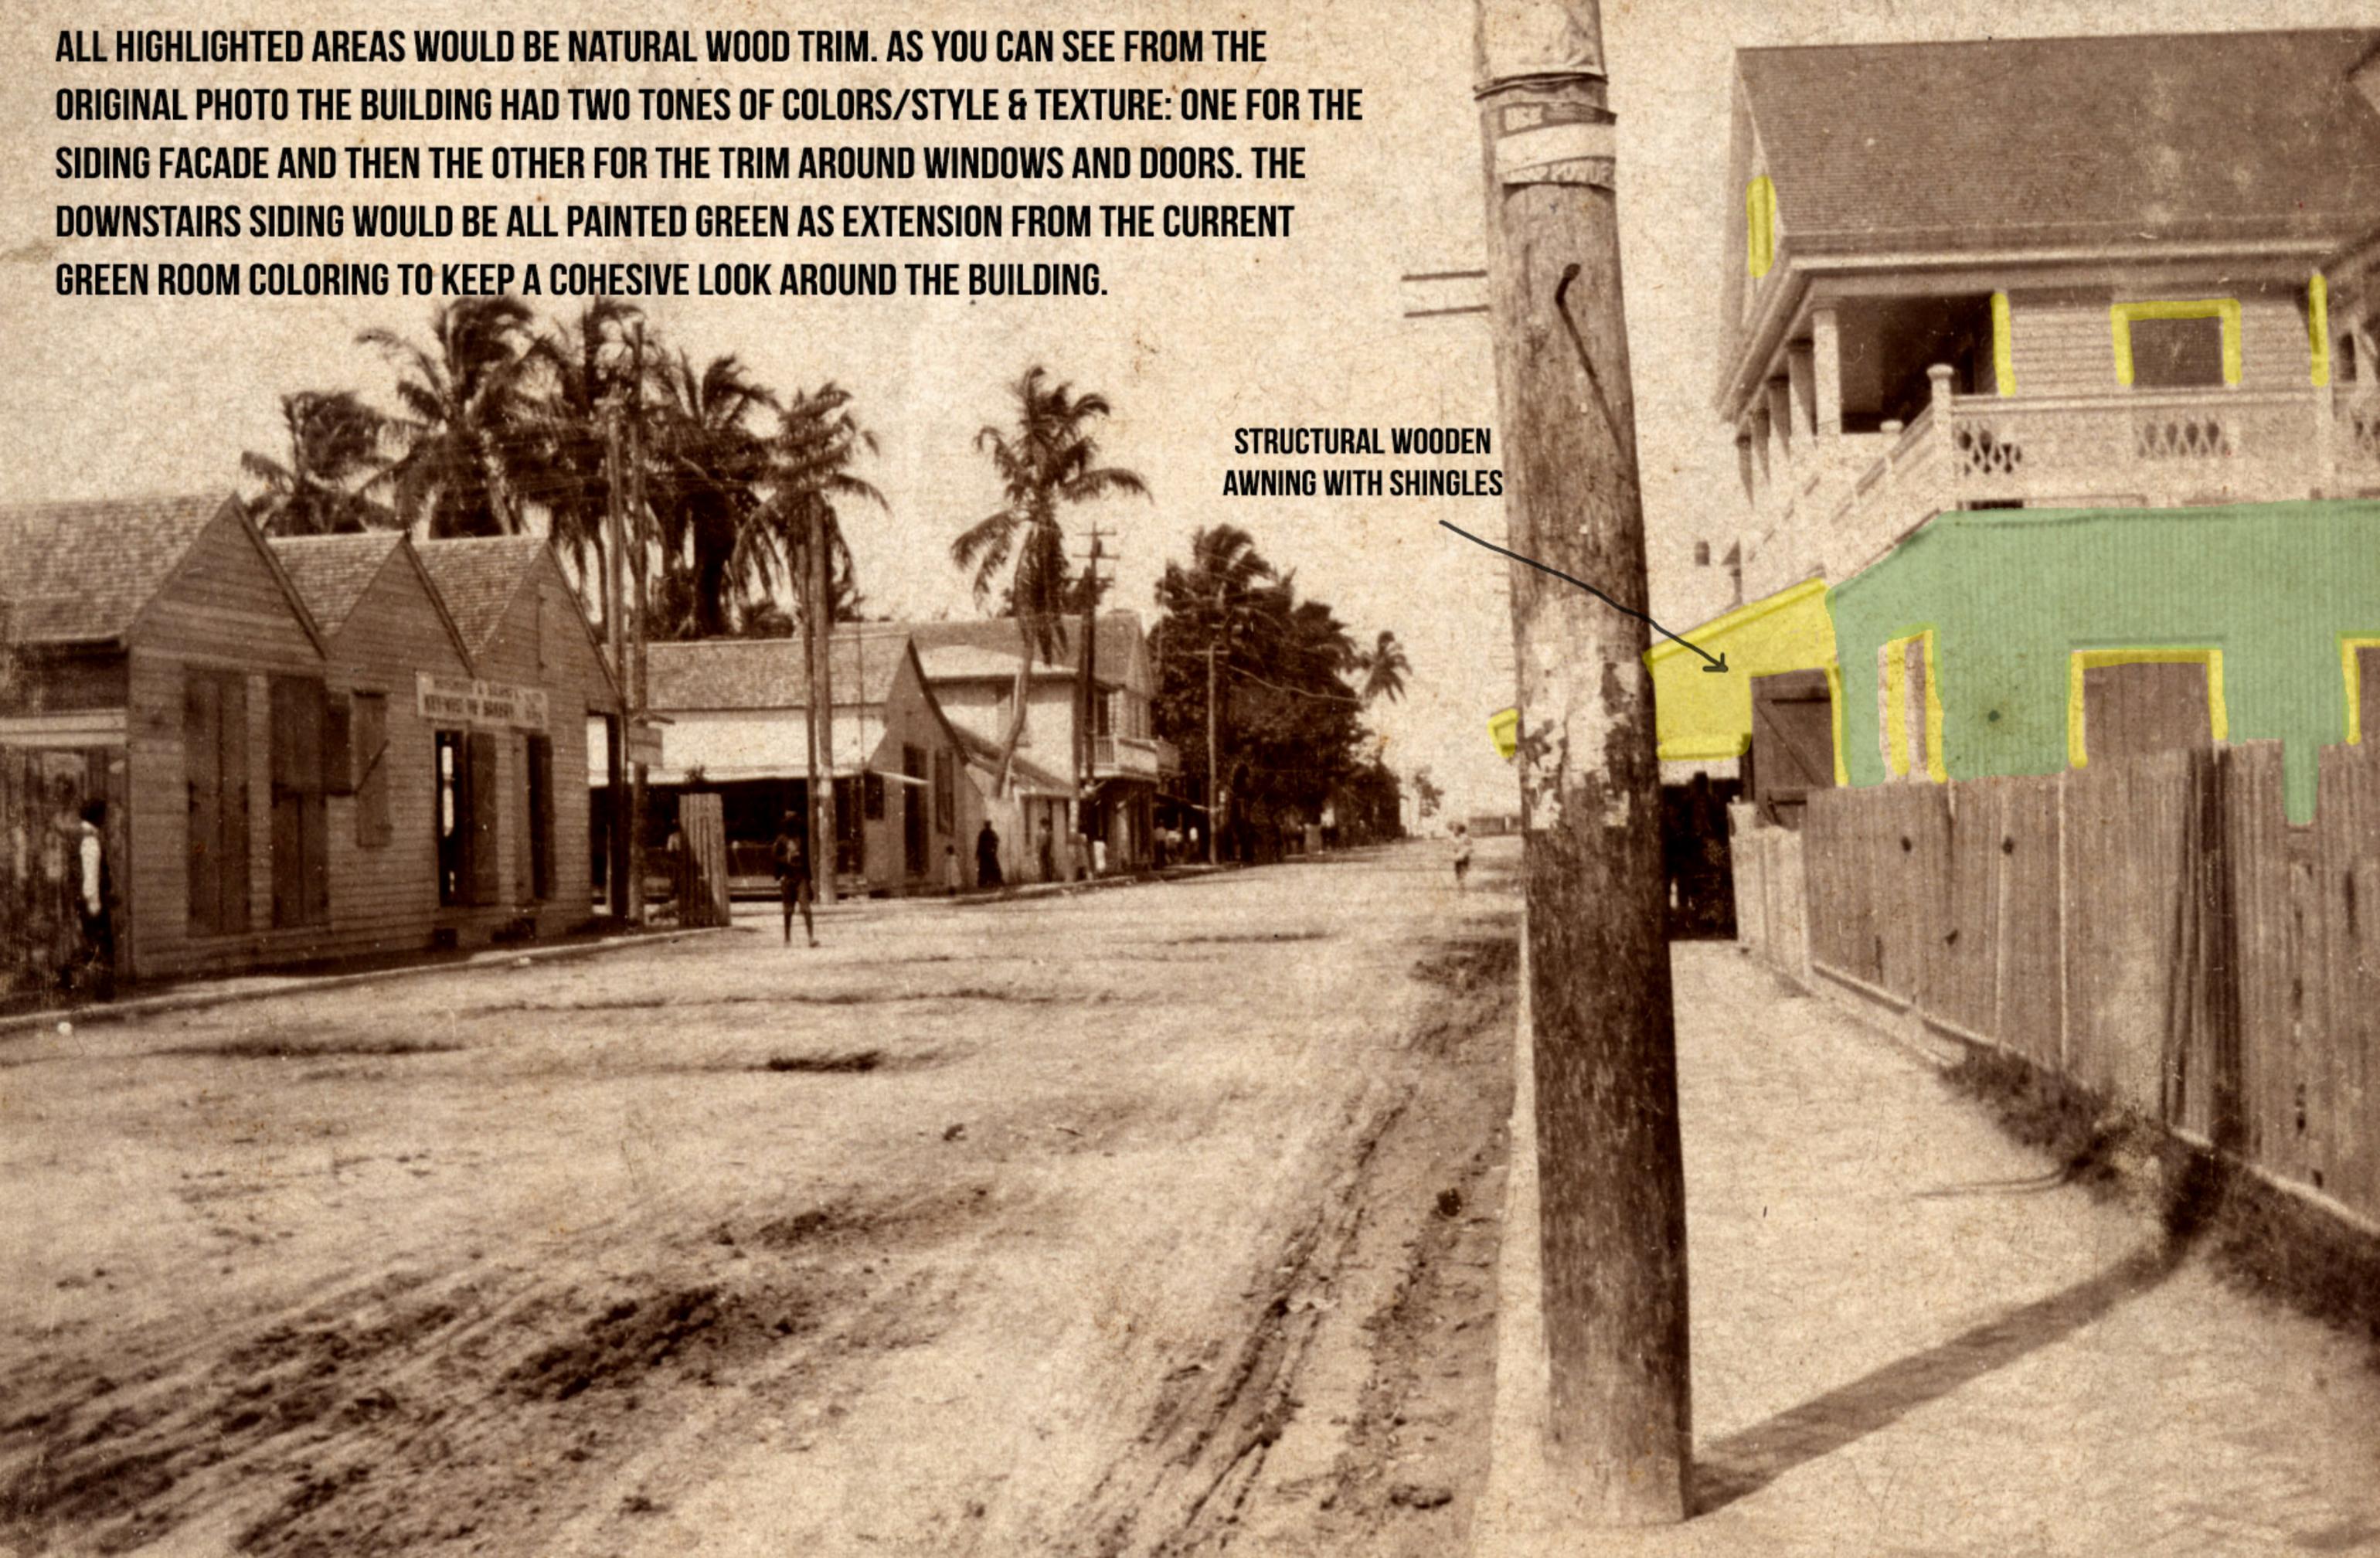

ALL HIGHLIGHTED AREAS WOULD BE NATURAL WOOD TRIM. AS YOU CAN SEE FROM THE ORIGINAL PHOTO THE BUILDING HAD TWO TONES OF COLORS/-STYLE & TEXTURE: ONE FOR THE SIDING FACADE AND THEN THE OTHER FOR THE TRIM AROUND WINDOWS AND DOORS. THE UPSTAIRS SIDING WOULD BE PAINTED WHITE.
