State Safety Office Marianne A. Trussell, Chief Safety Officer

Grant Selection Process

Each year the Highway Safety Grant Program Section of the Florida Department of Transportation (FDOT) Safety Office develops a comprehensive Highway Safety Plan that describes the projects recommended for federal funding during the upcoming federal fiscal year (October 1 to September 30).

Staff in the Highway Safety Grant section identifies traffic problems throughout the state by:

· Analyzing data from the Department of Highway Safety and Motor Vehicles (DHSMV)

Home | Business Partners | Employment | Programs | Projects | Related Links | Research/Statistics | Travel Information

- · Studying the results of observational surveys
- · Attending meetings of traffic safety communities
- Reviewing the rankings of the Problem Matrix

Following problem identification, statewide goals and objectives are formulated by staff and work commences on program module development. Project level concept papers are solicited and received by the Highway Safety Grant Program Section. Those that will help attain identified goals and objectives are considered for support with available funds. Each concept paper must fully describe the proposed project program (i.e. problem statement, proposed solution, objectives and proposed budget) and should be submitted to the Administrator of the Highway Safety Grant Program Section no later than the last day of March.

This process includes all current projects continuing into the next fiscal year to allow initial funding estimates to be developed. Continuation projects are given a high priority in order to honor prior funding commitments. The early submission of concept papers allows appropriate program area coordinators and Highway Safety Grant Program Section Management Staff sufficient time to review all proposals and select projects for inclusion in the draft plan which is sent to the Governor's Highway Safety Representative. Once all concept papers have been reviewed and prioritized for funding, a draft Highway Safety Plan is forwarded to the National Highway Traffic Safety Administration for review and approval, prior to October 1st.

Priority Program Areas:

- Program Overview
 Impaired Driving
- Police Traffic Services

- Speed Control
 Roadway Safety
 Occupant Protection/Child Passenger Safety
 Pedestrian & Bicycle Safety

- Motorcycle Safety
 Traffic Records
 Community Traffic Safety

Highway Safety Matrix

<u>Purpose</u>: The county and city matrices were designed to provide FDOT traffic safety planners an objective, data-driven tool to rank traffic safety projects. Both counties and cities are divided into three population groups. The numbers in each matrix represent where counties or cities rank within their population group in a particular program area, with "1" representing the worst crash rate, as described below. For example, the "12" next to Marion indicates they are ranked 12th in alcohol-related crashes among the 23 counties in Group 1.

Note that despite the reduction in fatal and injury crashes occurring over the past several years, the range of numbers appearing in the matrix does not change, because counties and cities are being compared to each other on a relative basis.

Measures used: The rankings in both matrices are based on rates of fatalities plus injuries over one, three, and five-year periods, in this case 2010, 2006-2010, and 2006-2010. In the County Matrix rates are 50% per population and 50% per vehicle mile traveled, with the exception of the Bicycle and Pedestrian areas, which are 100% per population. For the City Matrix, all rates are per population. Inmate populations are excluded in the calculations.

Specific measures for each column in the matrix are as follows:

- Total Fatalities and Injuries (F&I) overall fatalities plus injuries;
- Alcohol Related alcohol-related fatalities plus injuries (this includes both Driving Under Influence and crashes where had been drinking was a contributing circumstance);
- **Bicycle, Motorcycle, Pedestrian** F&I bicyclist, motorcyclist, and pedestrian fatalities plus injuries;
- Speed Related speed-related fatalities plus injuries;
- Safety Equipment injuries plus fatalities among drivers and passengers who were both not using safety equipment and were subject to the seat belt law;
- Aggressive Driving injuries plus fatalities in crashes where two or more of certain
 moving violations (includes careless driving, improper passing, and several others) were
 cited;
- Teen Drivers injuries plus fatalities among drivers aged 15-19, excluding bicyclists and motorcyclists;
- Older Drivers injuries plus fatalities among drivers aged 65+, excluding bicyclists and motorcyclists.

Alcohol, speeding, and aggressive driving are treated as causal factors, so that all injuries and fatalities in crashes involving them are counted. On the other hand, only bicycle, motorcycle, and pedestrian victims, drivers 15-19 or 65+, plus individuals not using seat belts are counted in their respective areas.

<u>Data Sources</u> -- The *DHSMV Traffic Crash Statistics Report* was used as the data source in the county matrix for the Total F&I, Alcohol Related, and the Bicycle, Motorcycle, and Pedestrian F&I areas. DOT's CAR database was used in the Speed Related, Safety Equipment, Teen Drivers, Drivers 65+, and Aggressive Driving areas, as well as the source for all data used in compiling city crash data.

<u>Subjectivity of crash data used</u>: It is important to realize that some of the measures cited above are more subjective than others. Total F&I, the Bicycle, Motorcycle, and Pedestrian F&I areas, Teen Drivers, and Drivers 65+ are relatively objective, as they are only based on crash victims. The other areas are all dependent on how thorough investigating officers are in documenting crash circumstances. It is quite likely there are differences among jurisdictions in this regard.

Other data limitations: County rankings are based on crashes occurring both inside and outside cities and municipalities and may involve different investigating agencies, including the Florida Highway Patrol, which does much of the enforcement in rural areas.

City crashes are much more subject to errors involving location. In some instances, crash investigators either are unaware of their exact location or write down the wrong DHSMV city code. The DOT Safety Office's Crash Records section identifies many of the location errors made on state roads. These corrections are reflected in crashes in the CAR database, but many errors still remain.

Highway Safety Matrix - Ranking of Florida Cities
