DATE: April 26, 2023

RE: 2501 Harris Avenue (permit application # T2023-0120)

FROM: Karen DeMaria, City of Key West Urban Forestry Manager

An application was received requesting the removal of (1) Mulberry tree.
A site inspection was done and documented the following:

Tree Species: Mulberry (Morass sp.)

Photo of whole tree.

Photo showing location of tree.

Photo of
tree
canopy,

Photo of tree canopy, view 3.

Diameter: 9.5"

Location: 80% (growing in back yard area)

Species: 50% (species not on protected or not protected tree list)

Condition: 40% (overall condition is poor.)

Total Average Value = 56%

Value x Diameter = 5.3 replacement caliper inches

Also removing a Cuban Laurel Ficus tree from side of property-no permit needed to remove this tree as it is less than 24" diameter (measured at 14").

Application

T2023-0120

Tree Permit Application

Please Clearly Print All Information unless indicated otherwise. Date: 3/31/23Tree Address 2501 Harris AveCross/Corner Street NPR Urban LaurelList Tree Name(s) and Quantity 1 - Ficus & 1 - Unknown - mulberry
Species Type(s) check all that apply ☐ Palm ☐ Flowering ☐ Fruit ☒ Shade ☒ Unsure

Reason(s) for Application:

- ☒ Remove ☐ Tree Health ☐ Safety ☒ Other/Explain below
☐ Transplant ☐ New Location ☐ Same Property ☐ Other/Explain below
☐ Heavy Maintenance Trim ☐ Branch Removal ☐ Crown Cleaning/Thinning ☐ Crown Reduction

Additional Information and Explanation

The Ficus is being pushed to grow towards the house.
Concerned it will eventually fall over onto the house.
Unknown tree in bad condition.

Clifton and Christine:

I did a site inspection today regarding the tree removal application. The ficus tree is a Cuban Laurel ficus. That species of tree is not regulated unless it is over 24 inches diameter. I measured the tree on the property at 14 inches therefore, no permit is required to remove the ficus tree.

The other tree, listed as unknown, I think is some type of Caribbean or South American species of tree, possibly a type of fruit tree. I have sent photos to several other people asking for their help with the identification. This tree is regulated and a permit is required to remove it. Once I know more about the species, I will let you know.

Sincerely,

Karen

Mulberry

Mulberry (*Morus* spp.) is a fruit producing tree that can provide gardeners tasty fruits. This tree also has a rich history.

Native red mulberry trees have been enjoyed by people in North America for centuries. On expedition in the mid-1500s De Soto observed Muskogee Indians eating dried mulberry fruits. Over winter the Iroquois mashed, dried, and stored the fruit to later add to water, making warm sauces that were occasionally mixed into cornbread. Cherokees made sweet dumplings by mixing cornbread and sugar with mulberries. The Timucua people of northeast Florida used the fruit, along with the tree's leaves and twigs, to make dyes, and the Seminoles used the branches to make bows.

The introduced white mulberry was brought from China in the early 1800s as a host plant for silk worms in hopes of establishing silk production in the United States. Trees were planted throughout the United States; however, silk production was too costly a venture. Despite the failure of the silk industry, the mulberry trees did well.

Characteristics

The mulberry plant family, Moraceae, also includes figs, jackfruit, and breadfruit. Mulberry trees produce small, sweet fruits that resemble slender blackberries. Mulberry fruits are quite popular with wildlife. Visiting creatures will reduce the harvest for your personal use, but on a good sized tree there should be enough fruits for all to enjoy.

These deciduous trees can have male and female flowers on the same plant (monoecious) or different plants (dioecious). Berries ripen in late spring or summer. If you select a dioecious type be sure you plant both a male and female tree to insure fruit production. Be sure to pay attention when purchasing trees, there are also weeping and contorted mulberry trees that are purely ornamental and do not produce fruit. Red mulberry trees and white mulberry trees can both grow quite large while black mulberry trees are generally the smallest. When considering their mature size, black mulberry trees may be the most practical choice for home gardens.

Red mulberry (*Morus rubra*), is a native, deciduous tree, found in moist soils from South Florida to west Texas. Also called American Mulberry, this tree grows to heights of 40 feet tall with the tree growing taller in the northern parts of its range. The pollen from male trees is extremely allergenic while female trees cause few to no allergies. These trees produce reddish or black fruits that are considered to be good quality. Red mulberry trees grow fairly quickly and are able to provide you with shade and fruit relatively soon after planting.

Despite the name, fruit from white mulberry (*Morus alba*) trees can actually be pink, black, purple, or white. White mulberry trees actually get their name from the color of the flower buds, not their variably colored fruits. These fruits, while sweet, are described by some as insipid when compared to red and black mulberries. Flower buds on white mulberry trees emerge a bit before those on red mulberry trees and well before those black mulberry trees. This is a large tree that grows up to 60 feet tall and has some salt and wind tolerance.

Black mulberry (*Morus nigra*) is native to western Asia and the Middle East. This mulberry tree produces what many consider to be the highest quality mulberry fruits. Fruit from these trees is almost without exception black. Black mulberry trees are more popular in warmer, drier areas like California; when grown in Florida, they're generally smaller with a more bush-like habit. If you're looking for a mulberry bush worthy of the nursery rhyme (https://en.wikipedia.org/wiki/Here_We_Go_Round_the_Mulberry_Bush), black mulberry just may fit the bill.

Planting and Care

Mulberry trees can be planted in many Florida landscapes as they thrive in infertile, sandy soils, are drought tolerant after establishment, and moderately wind resistant. These trees do best in full sun to light shade. Native red mulberry trees are usually found growing in the shade of larger trees.

When choosing a location, keep in mind that fallen fruits stain the surfaces they land on, so it's best to avoid planting over driveways, sidewalks, and patios. Selecting a light-fruited cultivar can also cut down on the mess factor; look for 'Tehama' or 'King White Pakistan'.

Mulberry trees require very little maintenance; they rarely require irrigation after establishment and generally do not require fertilization. As far as pruning goes, you can perform light pruning when trees are young to help create a strong framework of branches. With a mature tree, you should only prune to remove dead or damaged wood or crossing limbs, since the wounds caused when removing a major branches are slow to callous. Be careful when pruning your tree, mulberry trees have milky sap which can cause skin rashes in some people.
