## Methodology

Using a national research center, Clearview Research conducted interviews with a sample of 259 likely voters in the City of Key West. The survey fielded from Wednesday, January 24, to Monday, January 29.

The composition of respondents used current voter registration and previous election turnout as a model in an attempt to make the final sample "look like" the city's likely voter population. As such, the sample was balanced by gender, age, race, party, and region in order for our distribution to be consistent and similar to the overall population.

Demographic Subgroup	Targets				
Ge	Gender				
Male	52%				
Female	48%				
	Age

City Commission D2	10%				
City Commission D3	19%				
City Commission D4	19%				
City Commission D5	18%				
City Commission D6	17%				

Based on the above, the weighted combined sample is both random and representative, yielding a general response set with a margin of error of  $\pm$  6.0% at the 95% confidence level.
