**Historic Architectural Review Commission  
Staff Report for Item 4**

**To:** Chairman Bryan Green and Historic Architectural Review  
Commission Members

**From:** Kelly Perkins  
HARC Assistant Planner

**Meeting Date:** February 26, 2019

**Applicant:** FMH Contractors

**Application Number:** H2019-0002

**Address:** #291 Front Street

---

**Description of Work:**

Change existing wood doors to aluminum display windows on north façade at Building 1.

**Site Facts:**

Building #1, also known as the Naval Coal Depot and Storehouse and the United States Coast Guard Headquarters, was constructed from 1856 till 1861. The building served multiple purposes from warehouse to naval administration until it was transferred to the Department of Commerce in 1932. The structure was used as office for the 7<sup>th</sup> Lighthouse District until 1939, when the Lighthouse Service became part of the United States Coast Guard. The building was used as the Key West Station Headquarters for the Coast Guard.

The large building is the oldest brick building in Key West, and features architectural details such as buttressed brick piers, arched window recesses, a cupola with a lookout, metal tile gable roof, and brick corbeling. The brick was stuccoed and painted a tint of yellow-brown.

The building was added individually to the National Register of Historic Places in 1973.

**Guidelines Cited in Review:**

Secretary of the Interior's Standards for Rehabilitation (pages 16-17), specifically Standards 1 and 6.

Secretary of the Interior's Guidelines for Rehabilitation (pages 103-115), specifically the guidelines for "Designing the Replacement for Missing Historic Features" under Windows and Entrances and Doors.\*

[http://www.cityofkeywest-fl.gov/egov/documents/1517343066\\_39989.pdf](http://www.cityofkeywest-fl.gov/egov/documents/1517343066_39989.pdf)

Guidelines for Windows\* (pages 29-30), specifically guidelines 2 and 3.

Guidelines for Entrances, Porches, and Doors\* (pages 32-33), specifically guidelines 3 and 5.

\*Originally this elevation of the building had alternating archways with either solid brick or steel louvers. Sometime after 1910, the steel louvers were removed, and each recessed archway had rectangular windows installed. In the 1980s or early 1990s, 12 of the 16 windows on the north elevation were converted into doors. Thus, staff is citing all those sections for review.

### **Staff Analysis**

This Certificate of Appropriateness proposes to install eight aluminum, storefront windows on the Whitehead Street side façade of Building #1 to replace the existing full-lite doors. Four of the doors will remain to serve as side entrances to the structure, which is now used as a mall.

Originally, the building was designed with alternating recessed archways on its side elevations that had either solid walls of brick or steel louvers.

In the 1920s, the steel louvers on the sides were removed, and from photographic evidence, it appears that window fenestrations were installed in each recessed archway. The openings that were created were of differing sizes and heights, as if they were installed purely for function without considering the architecture of the building.

Staff believes that there might have been wood windows behind the steel louvers originally, as the front elevation contains historic 12/12 wood windows behind the steel louvers. Also, the recessed archways with the steel louvers have operable, fanlight windows in the arch. A postcard from the 1940s and a photo from the 1950s documents the fanlight windows above a three-light awning window, which is very similar to what exists today.

Photographs from the 1960s and 1970s show that the side elevations (the north and south façades) had 2/2 wood windows in some of the openings (as well as glass block). At some point, in the 1980s or 1990s, 9/9 wood windows were installed on the south façade and the window openings on the north façade that are behind the Aquarium building. The rest of windows on the north façade were replaced with wood full-lite doors. At some point, two-light transom windows were installed over some of the doors on the north façade.

In the rear, the steel louvers were removed, and currently 8/8 wood windows are installed. In general, most of the non-historic wood windows and doors are deteriorated and need repair or replacement. The historic 12/12 wood windows appear to be in good condition.

### **Consistency with Guidelines**

The guidelines are clear for that replacement and repairs to windows and doors “should *match the original fabric* as closely as possible” (Page 33, Guideline 5). In addition, “Entrances with deteriorated portions must be repaired with materials *that replicate the original features as closely as possible*” (Ibid, Guideline 3).

The guidelines for windows are even clearer. “Replacement windows, sills, muntins, sashes, surrounds, and other window features should be of similar and compatible configuration, material, size, design, and placement as those of original windows” (Page 29, Guideline 3). Standard 6 of the Secretary of the Interior’s Standards states, “Deteriorated historic features shall be repaired rather than be replaced. Where the severity of the deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture and other visual qualities, and where possible, materials.”

This project is similar to the recent proposal at the Aquarium, as the project covers replacing missing historic features. The existing doors are not historic, and staff is unsure whether there were any fenestrations on the façade originally. As such, windows were installed in the 1920s, and it was only in the last 30 years that fenestrations on the north façade were expanded into doorways.

The Secretary of the Interior’s Guidelines for Rehabilitation covers the replacement of missing historic features in each section of windows and entrances and porches. The recommendations for “Designing the Replacement for Missing Historic Features” are very similar. They emphasize new doors/windows/etc. should be designed to be compatible with the historic building. The text recommends, “Designing and installing a new entrance or porch when the historic feature is completely missing or has been previously replaced by one that is incompatible. It may be an accurate restoration based on documentary and physical evidence...or it may be a new design that is compatible with the *size, scale, material*, and color of the historic building” (Emphasis added) (Page 112).

That section is clear in that the replacement feature should be compatible with the historic building. The structure has been altered over time as it received new governmental or military use, but historic photos document that the windows on the north and south elevation were 2/2 wood windows.

The architecture of Building #1 is very much oriented towards verticality on its side elevations with the design of the recessed archways with tall uninterrupted facades. When the steel louvers were removed, and fenestrations were installed in each opening, the windows were 2/2 – which created and continued a vertical orientation. Even the current façade, with the fanlight windows, three-light awning windows and full-lite doors with transoms are oriented towards traditional fenestration configurations and verticality – helping to emphasize the height and scale of the recessed archways.

The proposed aluminum display windows, with one solid glass pane, will take away from the vertical orientation of the recessed archways. As the north façade was always very solid, increasing the amount of transparent glass will move the building further away from its historic character. The proposed window configurations are not compatible with the architecture of the building or compatible with the historically documented, traditional fenestrations. The proposed display windows are to accommodate and enhance the current use of the building (a mall), without taking into account the historic usage of the building (warehouse and offices for various military and governmental entities). Standard 1 of the Secretary of Interior's Standards for Rehabilitation states that "A property shall be used for its historic purposes or be placed in a new use that requires minimal change to the defining characteristics of the building, and its site and environment." While the building functions as a mall, changes to the structure's character defining features should not be dictated by the new use.

While staff will not ask the owners of the building to return the 12 doors back to the historically documented fenestration sizes, staff does recommend that the new doors and windows should more accurately reflect the character and architecture of the building. They need to emphasize the vertical orientation of the recessed archways, and more reflect traditional window and door configurations.

Building #1 was constructed at a time when aluminum didn't exist, and the major renovation to add windows happened in the 1910s/1920s before aluminum was used in Key West as a building material. Documented historic fenestrations of the building were wood, and as such, staff opines that the replacement windows and doors should be wood to be compatible with the historic building and to be consistent with the HARC Guidelines and Secretary of the Interior's Standards and Guidelines for Rehabilitation.

### **Recommendations**

Staff finds the proposal inconsistent with the guidelines, the Secretary of the Interior's Standards, and the Secretary of the Interior's Guidelines for Windows and Entrances and Doors. Staff also recommends the Commission should think about all the fenestrations on this building as a whole.

In general, there are many different window and door types across the entirety of this building. Due to the building's location, each elevation is highly publicly visible. As many of the windows and doors are deteriorated and will soon need replacement, this would be a good time to address the style, material, and configuration of replacement windows and doors for the entirety of the building to create a more cohesive appearance.
